Branch: CBA Batch: 41. Sem : 4
Subject: FET**

PRACTICAL 2

Objective: To create a webpage related to music store.

A music store page is a perfect experiment for music lovers. To build this page, you must know the nitty-gritty of HTML5 and CSS3.

Exercise:

On the music page, the first thing to do is to add an appropriate background image and write a short description of what you will find on this page. The header section of the page will contain different menus that list songs based on features like genre, year, singer, album, and so on. Add relevant links and images for the collection of songs available. At the footer, you can include contact details, and links for registration, in-store purchases, subscription packages, and trial options.

OUTPUT :

The screenshot shows a Mac OS X desktop environment. At the top is the Dock with various application icons. Above the Dock is the system tray showing battery level (51%), signal strength, and the date and time (Tue 17 Jan 5:57 PM). The main window is a Microsoft Edge browser displaying a search result for "FET". The search results page has several links, with the first one, "prac2.html", highlighted. This link is being viewed in a code editor overlay. The code editor shows the following HTML and CSS:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <style>
        p {
            color: chartreuse;
        }

        ul#menu li {
            display: inline;
            margin-left: 12%;
            text-align: center;
            color: black;
            font-weight: bold;
        }

        body {
            background-image: url(https://4kwallpapers.com/images/wallpapers/macos-big-sur-apple-macbook-pro-15-inch-4k-wallpaper-1080x1920.jpg);
            background-size: cover;
            background-position: center;
        }

        .navBar {
            /* position: fixed; */
            display: flex;
            align-items: center;
        }
    </style>
</head>
<body>
    <ul id="menu">
        <li>Home</li>
        <li>About</li>
        <li>Contact</li>
    </ul>
</body>

Music Library

It is about the music.

Here we can get the filters like genres, singer, year, music type, album etc.

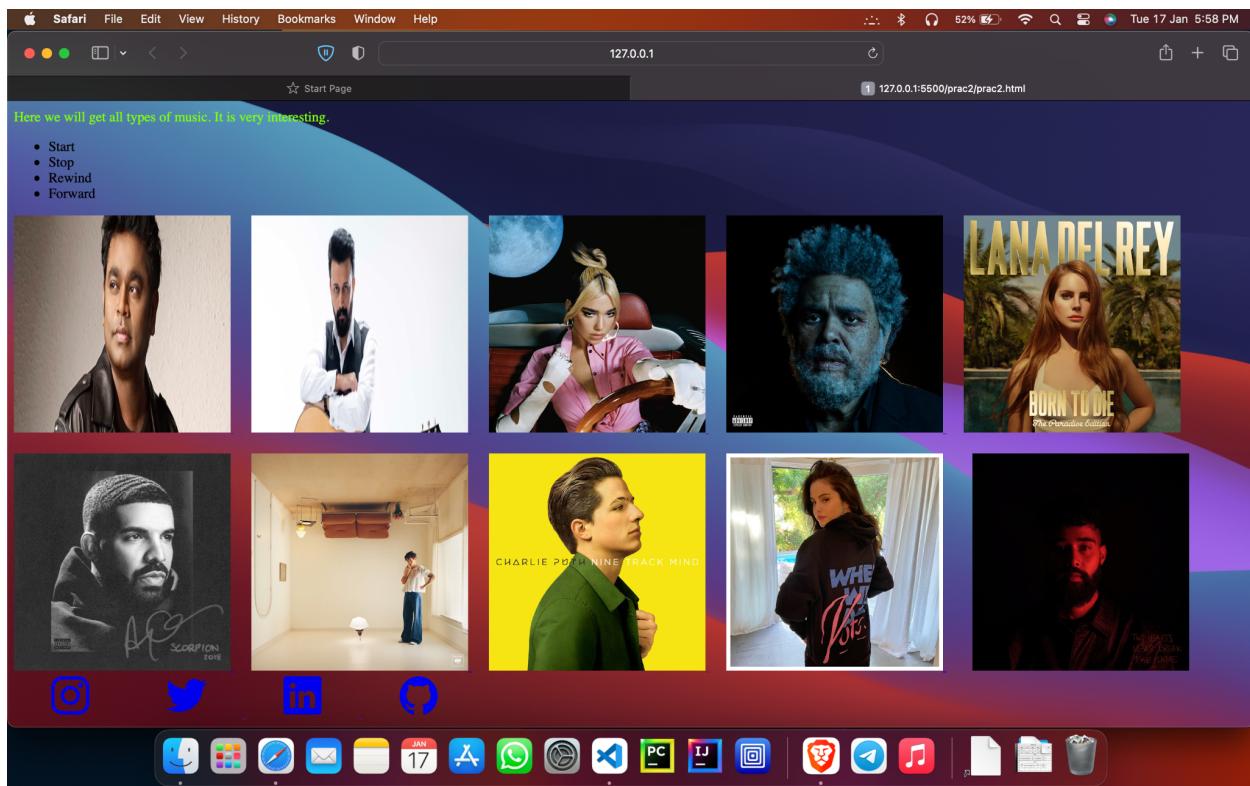

Here we will get all types of music. It is very interesting.
