Subject: FET

Practical - 12 (To-Do List)

GITHUB LINK:

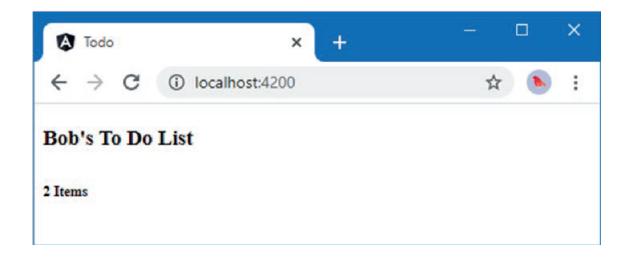

https://github.com/Shivam3783/FET-PRACTICALS/tree/main/PRAC12

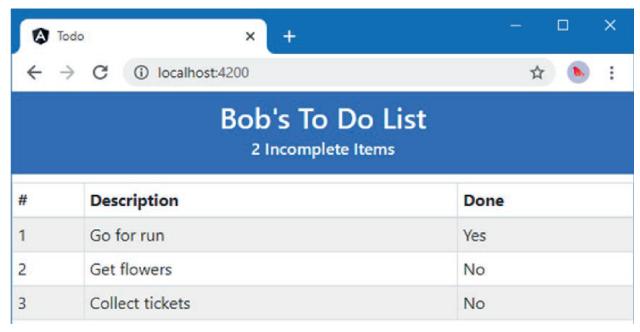

Objective: To understand the framework of Angular, implement one-way, two-way bindings and structural directives (ngFor, nglf and ngSwitch), wherever applicable.

Exercise:

Develop an Angular application that will manage a to-do list. The user should be able to see the list of to-do items, check off items that are complete, create new to-do items and delete any to-do item.

Note: Screenshots shown below are just for your reference, you can design the application on your own.

- You may insert a checkbox for the Done status, or strikethrough the task description if it is done.
- 2. Insert buttons to create a new task, to delete a task and so on.

CODE:

```
⊳ ৸ Ⅲ …
                                                                                              TS app.component.ts M X # app.component.css M
